# Introduction

---

**“Diseases that harm require treatments that harm less”**

*William Osler*

In pursuit of this noble goal the urologists of the 20th century brought us great achievements in our field, but it has been **over the past 25 years**, in particular, that **the specialty of minimally invasive urology has become predominant**

...it started from here.

*BJU International* (2001), 87, 408–410

POINT OF TECHNIQUE

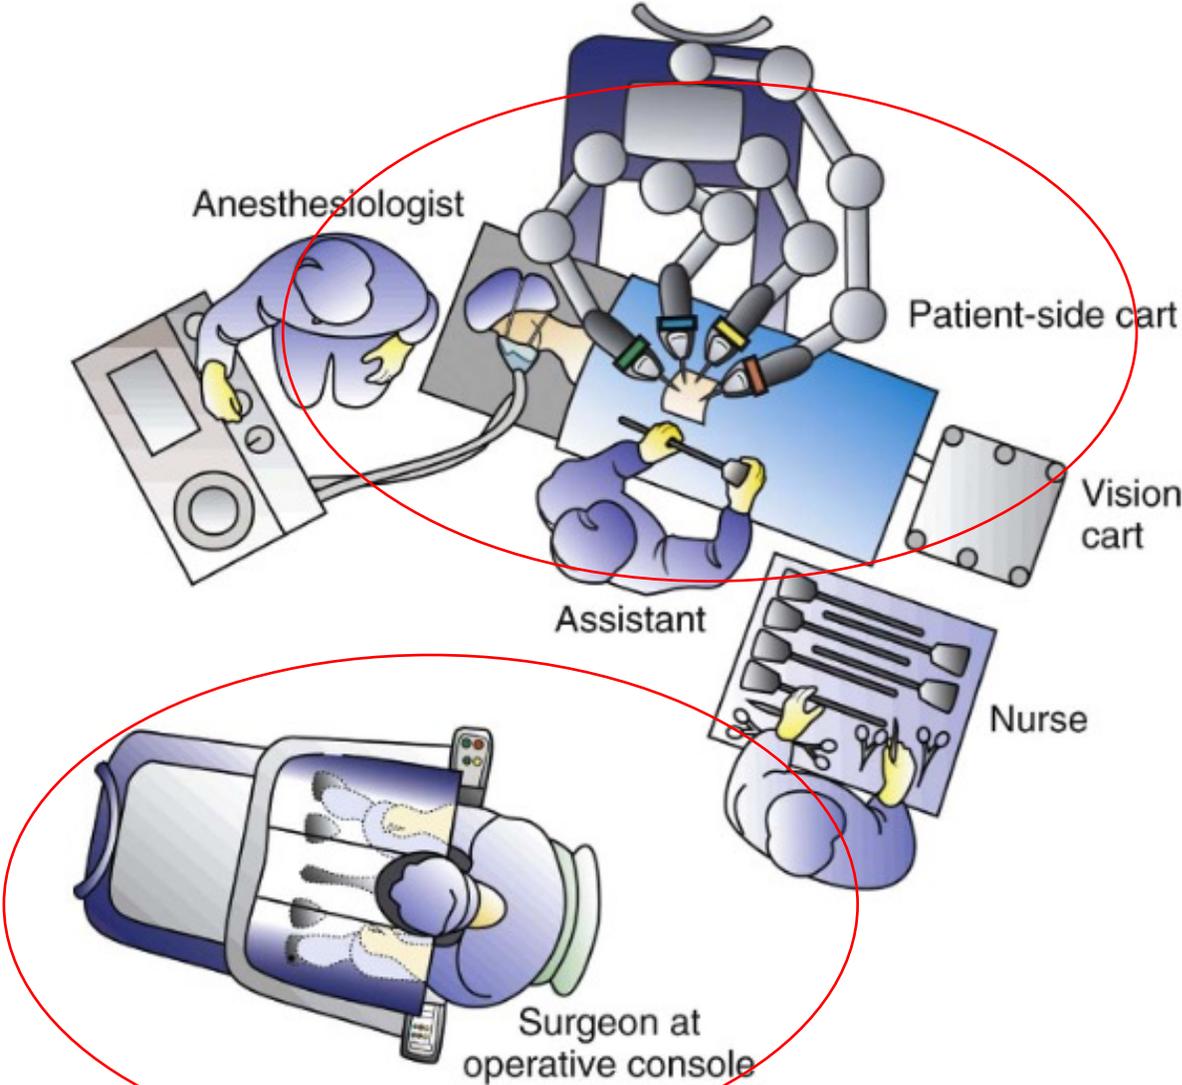

**Robotically-assisted laparoscopic radical prostatectomy**

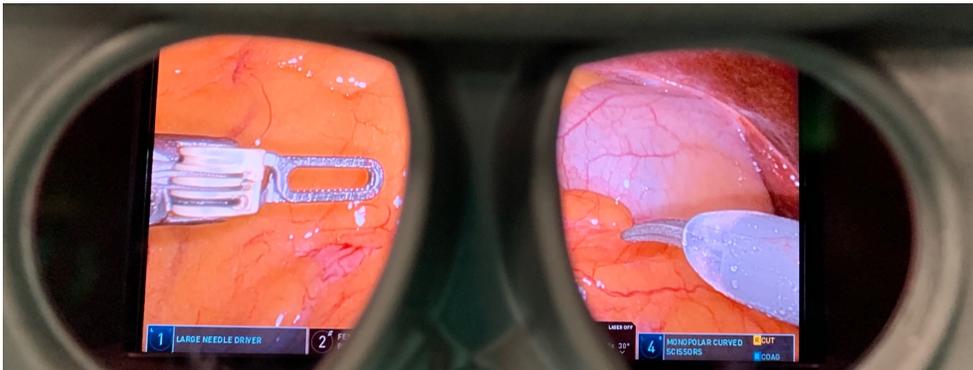

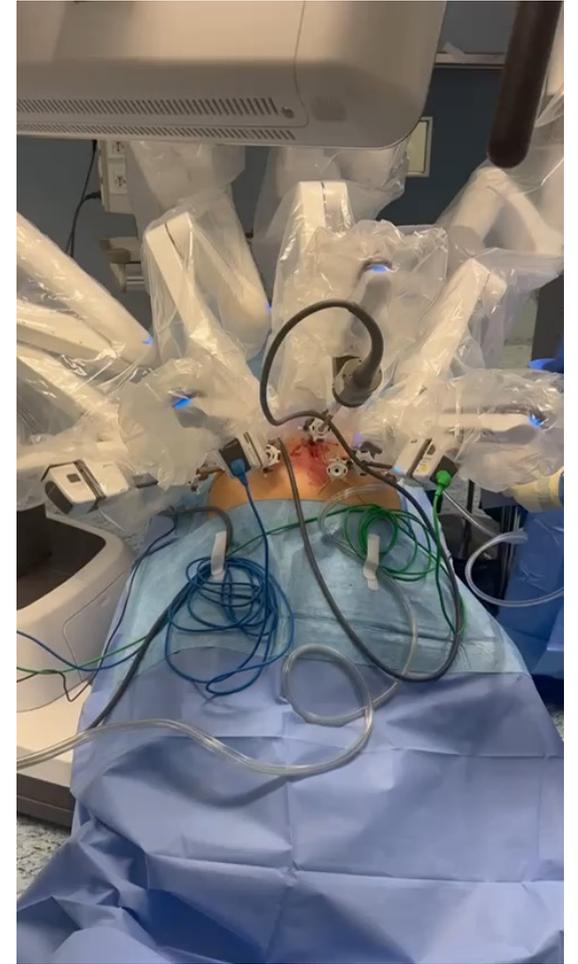

J. BINDER and W. KRAMER

*Department of Urology and Paediatric Urology, University Hospital, Johann-Wolfgang-Goethe University, Frankfurt am Main, Germany*

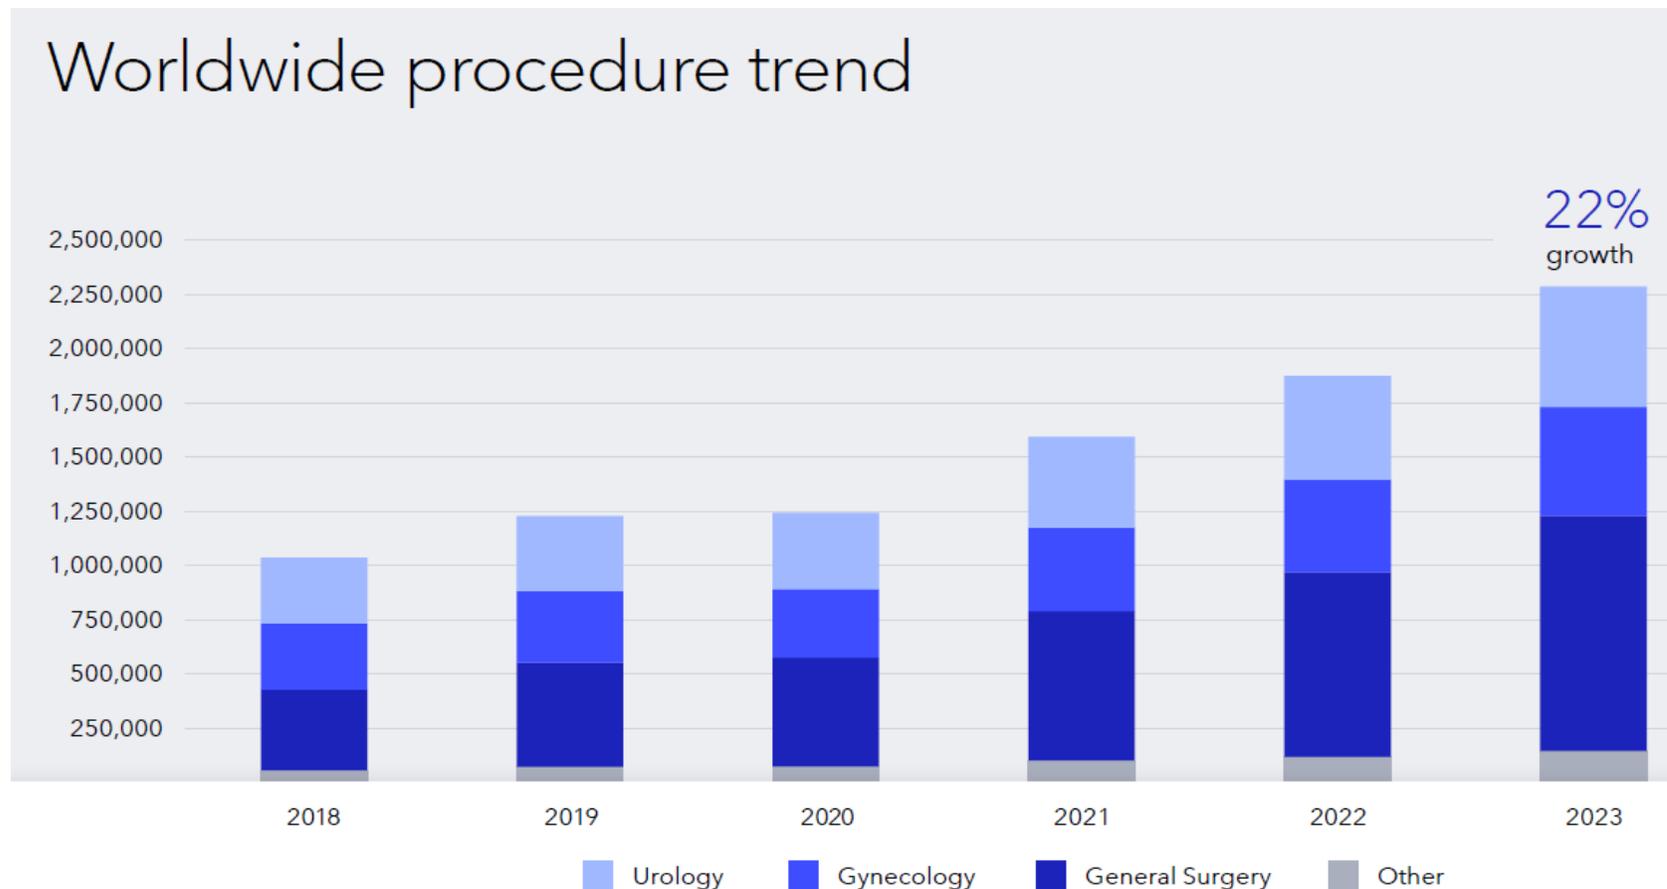

# Placement of the Operative Team for Robotic Procedures

---

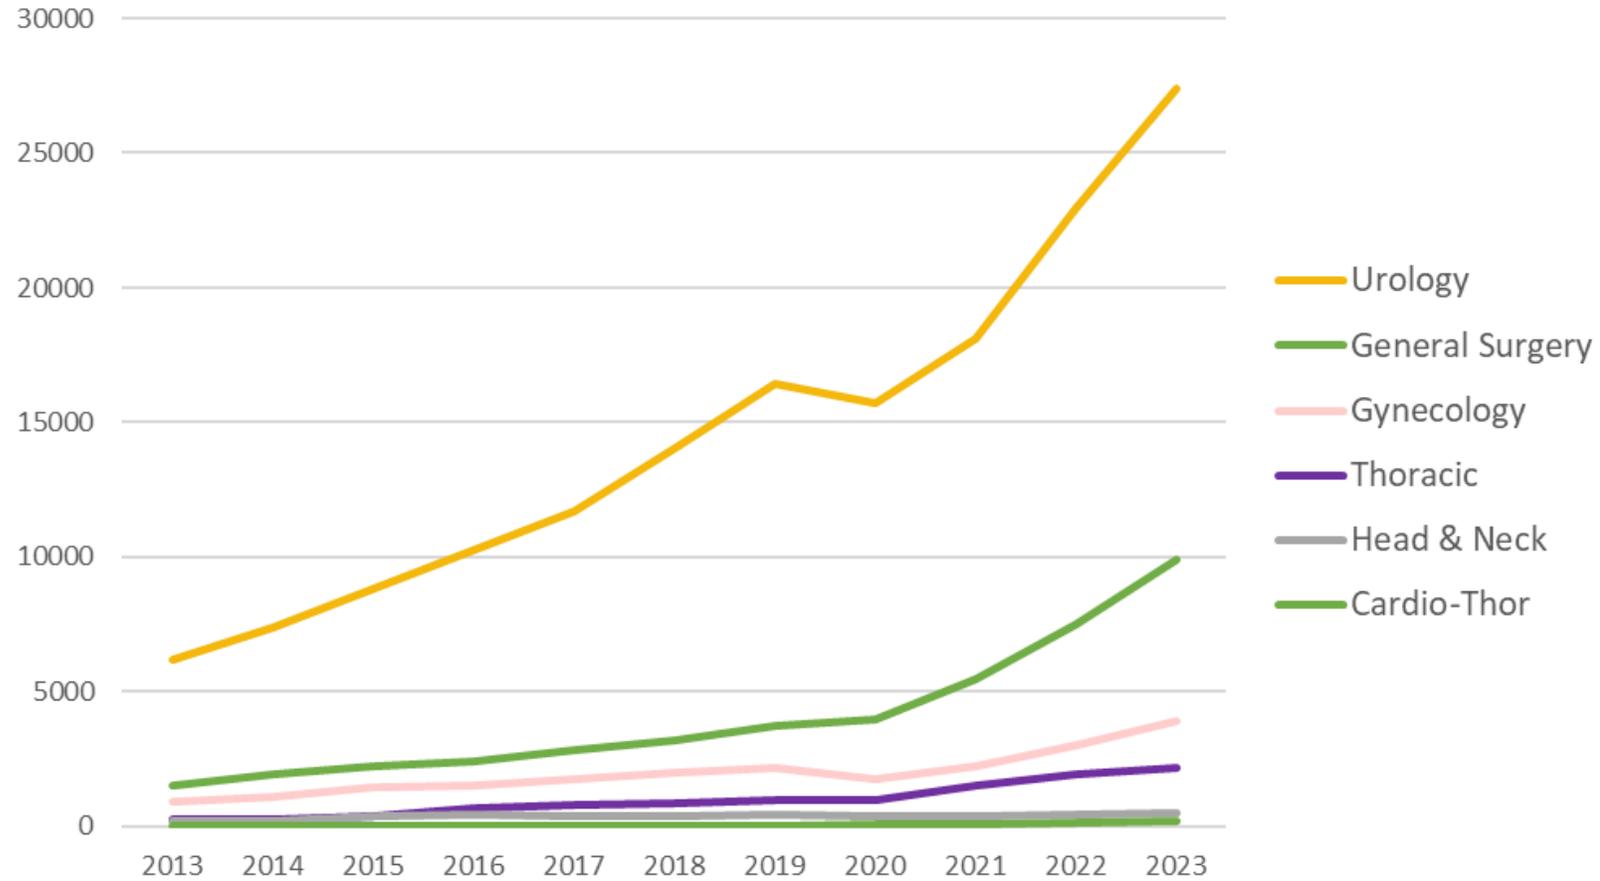

# Il sistema robotico da Vinci - Procedure robotiche da Vinci nel mondo\*

a partire dall'anno 1999, nel mondo sono state eseguite oltre 14.200.000 di procedure da Vinci di cui oltre 2.200.000 nel 2023

# Learning curve and positive surgical margins

# Training, training, training!!!!

Full urinary continence recovery according to the learning curve

# New possibilities for training:

---

- Video analysis
- Simulation
- Standardized metrics
- Release of certificates
- Telementoring

IRCAD, Strasbourg (FR)

ORSI, Melle (BE)

# Patients' expectations from surgery:

---

1. Guarigione dalla malattia (tumorale o funzionale)
2. Evitare effetti collaterali peri-operatori
3. Ritorno «integro» alle condizione pre-operatoria
4. Convalescenza rapida e ripresa delle normali attività

# Tumore genito-urinari: risultati oncologici

## Robot-assisted laparoscopic prostatectomy versus open radical retropubic prostatectomy: early outcomes from a randomised controlled phase 3 study

John W Yaxley, Geoffrey D Coughlin, Suzanne K Chambers, Stefano Occhipinti, Hema Samaratunga, Leah Zajdlewicz, Nigel Duglison, Rob Carter, Scott Williams, Diane J Payton, Joanna Perry-Keene, Martin F Lavin, Robert A Gardiner

	Total (n=308)	Radical retropubic prostatectomy (n=151)	Robot-assisted laparoscopic prostatectomy (n=157)	p value
<b>Perioperative outcomes</b>				
<b>Operative duration</b>				
Surgery, min	217.97 (47.63)	234.34 (37.07)	202.03 (51.36)	<0.0001
Recovery, min*	107.54 (111.64)	107.12 (146.63)	107.94 (61.18)	0.95
Operating room, min	263.00 (49.79)	280.37 (36.36)	246.08 (55.12)	<0.0001
Intraoperative adverse event	15 (5%)	12 (8%)	3 (2%)	0.02
Estimated total blood loss, mL	886.54 (645.62)	1338.14 (591.47)	443.74 (294.29)	<0.0001
<b>Blood transfusions</b>				
Non-autologous intraoperative	0	0	0	..
Non-autologous postoperative	7 (2%)	6 (4%)	1 (1%)	0.12
<b>Admitted to intensive care unit</b>				
Planned	6 (2%)	3 (1%)	3 (2%)	..
Unplanned	5 (2%)	5 (3%)	0	..
Readmission	20 (7%)	12 (8%)	8 (5%)	0.32
Indwelling catheter, days	8.21 (2.47)	8.42 (2.28)	8.21 (2.64)	0.50
Length of hospital stay, days	2.39 (2.30)	3.27 (1.49)	1.55 (2.61)	<0.0001
Postoperative complications†	20, 24 (6%)	14, 17 (9%)	6, 7 (4%)	0.05

# Risultati da studi randomizzati - RARC

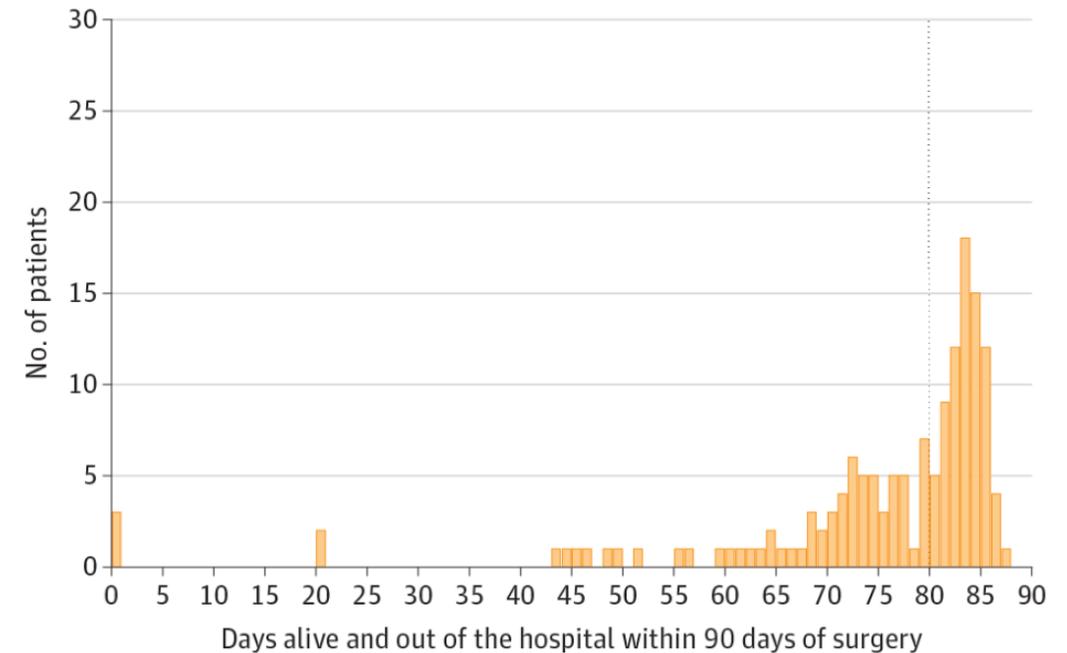

May 15, 2022

## Effect of Robot-Assisted Radical Cystectomy With Intracorporeal Urinary Diversion vs Open Radical Cystectomy on 90-Day Morbidity and Mortality Among Patients With Bladder Cancer

A Randomized Clinical Trial

B Open radical cystectomy

- -11% wound-related complications
- 7% vs. 12% transfusions in RARC
- 1.9% vs. 8.3% in thromboembolic events

# Conclusions:

---

Chirurgia robotica:  
medicina lontano dal paziente

....ma sicuramente più vicina alle  
esigenze del paziente

*Frank De Nota per SIU, 2023*
